

CLIENT EXPERIENCE

Developing the right custom application

This non-profit organization had an urgent requirement for a Health Information System to collect medical and operational data from their global field locations. Their priority was to provide the tools to their field staff in order to collect patient data and log operational activities. The regional coordinators and headquarter specialists required a dashboard and reporting system to analyse the field operations.

We delivered the solution using an agile approach which allowed us to continuously release functionality to our client.
