

## CLIENT EXPERIENCE

### Cloud Automation

One of the biggest misconception when you talk about cloud is to think that it means that you will replace your infrastructure with an IaaS platform. Actually, you can move to the cloud and keep your own servers. You will manage your servers and your VMs with the same latest technologies used by the famous cloud providers. This means that in your company, when you need to have a new server, you will get it in 50 minutes instead of 5 months.

## WHAT

### Main sectors of Activity

- Banking & Insurance
- Consumer Goods
- Public Sector
- Industry
- Technology, telecommunications
- Health Services

### Your Challenges

- Security
- Big Data
- Cloud Computing
- Information Mobility

### Our practices

- IT Organisation & Service Management
- Portfolio & Project Management
- Architecture & Development
- Enterprise Testing
